Mixed In Key Introduces PLATINUM NOTES 3

Drop in your files. Platinum Notes makes them acoustically perfect for any sound system.

South Beach, Miami - March 22, 2010 – Mixed In Key today introduced PLATINUM NOTES 3, a new audio mastering tool for DJs. Developed by the creative team behind Mixed In Key software, PLATINUM NOTES 3 corrects pitch, adjusts volume, improves dynamics and makes every file ready to be played anywhere – from an iPod to a festival sound system.

PLATINUM NOTES 3 works as a batch-processing tool. It accepts MP3, WAV and AAC files as input, processes them, and encodes the output to pristine-quality MP3 or WAV files. The latest version uses technologies licensed from iZotope, Inc (makers of Ozone), zplane.development (makers of algorithms used in Mixed In Key) and Mixed In Key's own studio-grade filters.

The third version of PLATINUM NOTES introduces the following new features:

- Ability to customize how PLATINUM NOTES works
- Multi-core support for up to 16 cores for faster processing
- Audio waveform display to show the processing done for each song
- Improved ID3 tagging support

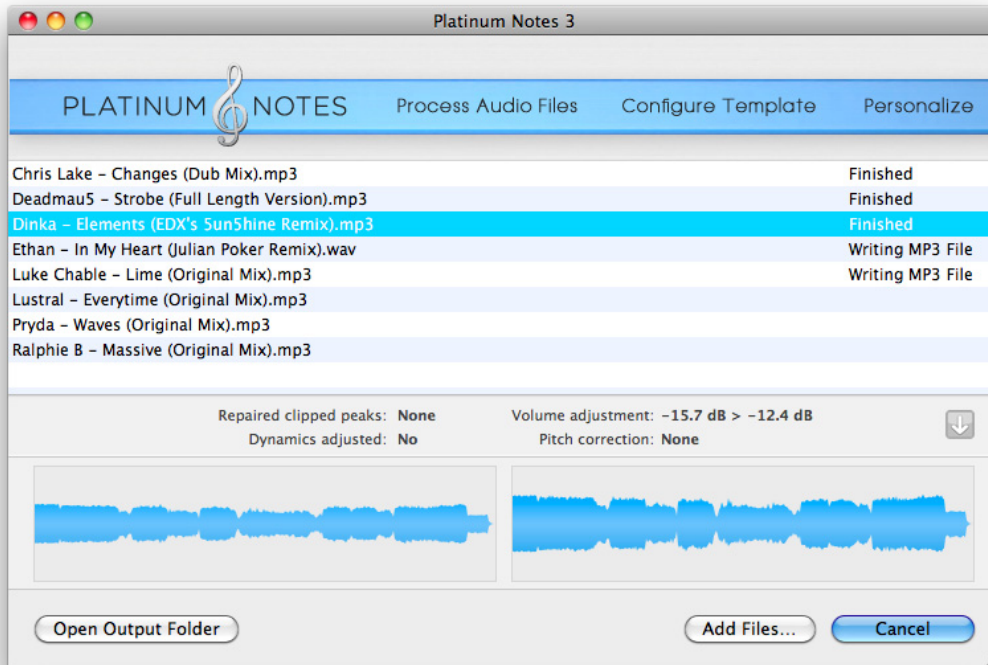

PLATINUM NOTES 3 offers an intuitive way to process an entire music collection and make it sound crisp and clean. The audio technology in PLATINUM NOTES 3 ensures high audio quality while template customization allows the customer to shape the sound.

Pricing and availability

PLATINUM NOTES 3 is available for download purchase at www.PlatinumNotes.com for \$98 USD. The software comes with free 3.X upgrades, and allows the customer to install it on an unlimited number of personal computers.
